

RetailHub Kenya Sales Performance Dashboard

Business Case Study

Prepared by: Marian Amondi

Data Analyst | Excel | Business Intelligence

Executive Summary

This project demonstrates the development of an interactive Microsoft Excel dashboard for monitoring retail sales performance. The dashboard transforms raw transactional data into meaningful business insights using KPI cards, PivotTables, PivotCharts and slicers.

Business Problem

Retail managers require a single reporting solution to monitor sales, profitability, regional performance, products and salesperson performance.

Objectives

- Build an interactive dashboard
- Track KPIs
- Analyze regional performance
- Monitor monthly trends
- Support decision-making

Dataset Overview

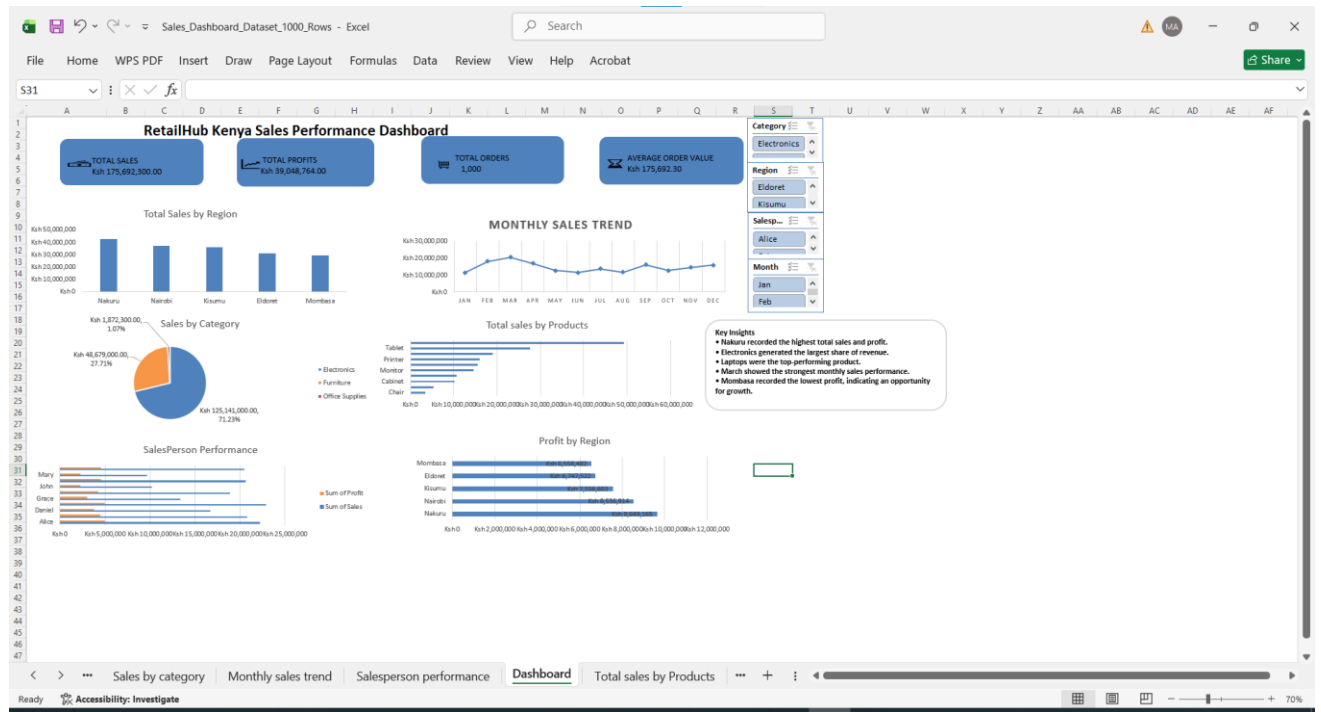

- 1,000 simulated retail sales records
- Regions: 5
- Categories: 3
- Salespeople: 10
- Products: Multiple

Methodology

1. Data Cleaning
2. KPI Calculations
3. PivotTables
4. PivotCharts
5. Interactive Slicers

6. Dashboard Design

Dashboard Preview

Key Insights

- Nakuru recorded the highest sales and profit.
- Electronics generated the largest share of revenue.
- Laptops were the top-performing product.
- March showed the strongest monthly sales.
- Mombasa recorded the lowest profit.

Recommendations

- Increase investment in high-performing regions.
- Improve sales in low-performing regions.
- Maintain inventory for top-selling products.
- Monitor KPIs monthly.
